Highlighted projects (All projects provided by request)

Project	Comscore TV client app and internal tools
Project role	Senior Developer
Project description	Comscore TV client app provides the web interface for checking statistics and analytics for tv and video usage for both TV and internet videos. Allows to filter data tables by lot's of fields and showing thousands of rows of data, went through analytics and customizations. App also allows clients to run reports with different demographics, dates, networks, etc. set. It provides usage reports for internal purposes and event issuing for data sets. Our team also been working on internal tool that allows product managers to edit ads' information, which then provided to clients in any kind of reports.
Responsibilities	- Creating new functionality and changing existing according to specs - Regular communication with clients and team - Accurate estimating and planning - Participating in code review process - Keeping app's packages secure and up to date - Writing unit tests - Developing tool for product managers to edit ads' information (back end and front end) - Daily stand-ups, retrospectives and sprint plannings
Main technologies	Angular 2+, NodeJs, Hapi, jest, jasmine, rxjs, npm, aws-sdk, knex, postgresql, TypeScript, ts-node, eslint, ag-grid, angular cli, joi, redis, docker, BitBucket, WebStorm
Project	Digital river
Project role	Tech lead
Project description	Digital River allows its clients to create, modify and administrate web sites with all the necessary payment methods. Digital River also provides legal support for its clients, so that they do not need to worry about all the laws in the countries they provide their service to. Digital River takes this responsibility.
Responsibilities	- Developing new functionality according to specifications (adding necessary markup and functionality fixes) - Communicating with client's dev team on a daily basis - Writing QA Forms to help QAs and client understand the accomplished task - Working with client's team to add new payment method KCP - Performing code review - Performing code refactoring - Bug fixing
Main technologies	TypeScript, Angular 2+, HTML/CSS, XSLT, XML, Java, AWS, WebStorm, bitbucket

Education

2008 – 2014	Higher, in Belarusian State Academy of Aviation, Engineer

Additional information

About me	I believe that self-development is the key to success, to make new friends and to have a quality time. Strong English skills. Communication and business correspondence with clients and developers from other countries.
My hobbies	In my free time I like to get new knowledge and making some side projects. The last one I did is short URL service for my personal web site itln.by. It provides short URLs for the long ones from itilin.by. I have one more passion – music. I like to listen to it; I like to play it. I played drums for several years and several bands and even have few songs recorded. Besides drums I like guitar, especially acoustic, because it allows you to create nice and pure sound. Proud father.
Certificates	I don't think that certificate is something important, while you can do your job well. I agree, that basics one can get from university are essential for the developer career, but now you can get all the knowledge from the internet. Though I have some certificates not related to my current programming language. This is because learning platforms provide certificates when you finish the course. And basically, all languages have lots of similarities, so learning language doesn't make a person good at it. And here's the proof: My python basics certificate: https://stepik.org/cert/259256
